

Welcome to the 222 Main Parking Garage.

Monthly parking card

The garage is equipped with Automatic Vehicle Identification (AVI) cards. For optimal performance the card should be mounted (using the clear plastic sleeve) on the top left (drivers side) corner of your windshield. The card must be placed in the clear plastic sleeve with the blue side of the card towards the driver and the grey side of the card against the window.

Clear Plastic Sleeve

Front (grey) of card towards windshield

Back of card (blue) toward driver

Entrances/Exits

There are two entrances/exit to the parking garage:

- 1) 200 south next to the Monaco, use the right (south) lane. The center lane is for delivery trucks and peak times.

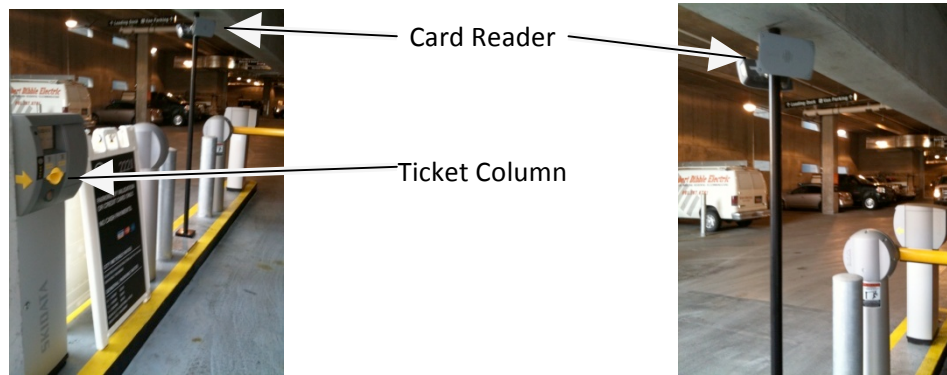

Use right (south) lane for entry

- 2) 300 south just west of the Cliff building. This entrance is only accessible to westbound traffic on 300 south.

Use of AVI cards

If your card is mounted to the windshield, pull all the way up to the gate (do not stop at the ticket column), the vehicle must stop before access is granted.

If you choose not to mount the card, pull all the way up to the gate, hold your card next to the windshields with the blue side towards the driver. Hold the card still until access is granted. Drivers do not need to roll down their windows to present an access card.

The card readers are mounted on polls next to the gate arms, a green light on the card reader will flash when a valid card is presented to the reader. If an access card is not working, drivers can look at the display on the ticket column for an error message. Pressing the call button on the ticket column will call an Ampco representative.

Note: This garage is equipped with Anti-Passback. Each AVI access card will let 1 car in the garage, the card will then allow the car to exit the garage. Cards cannot be passed back to let a second car in or out of the garage. A monthly card holder may transfer a pass between cars once the car has left the garage.
